

## Cambridge STAR Inventory: MAPS

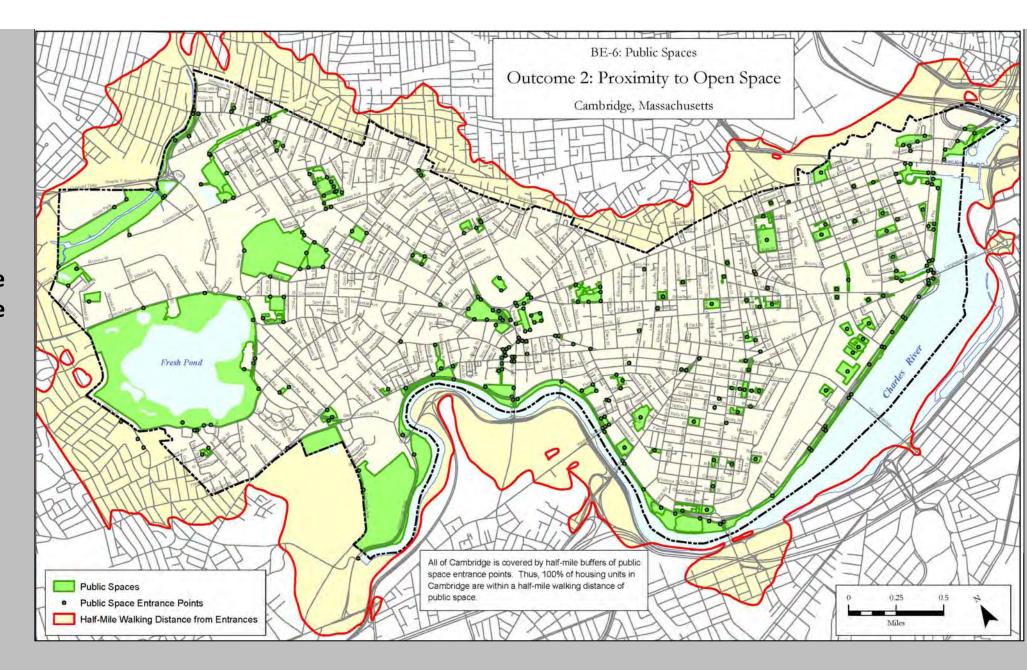

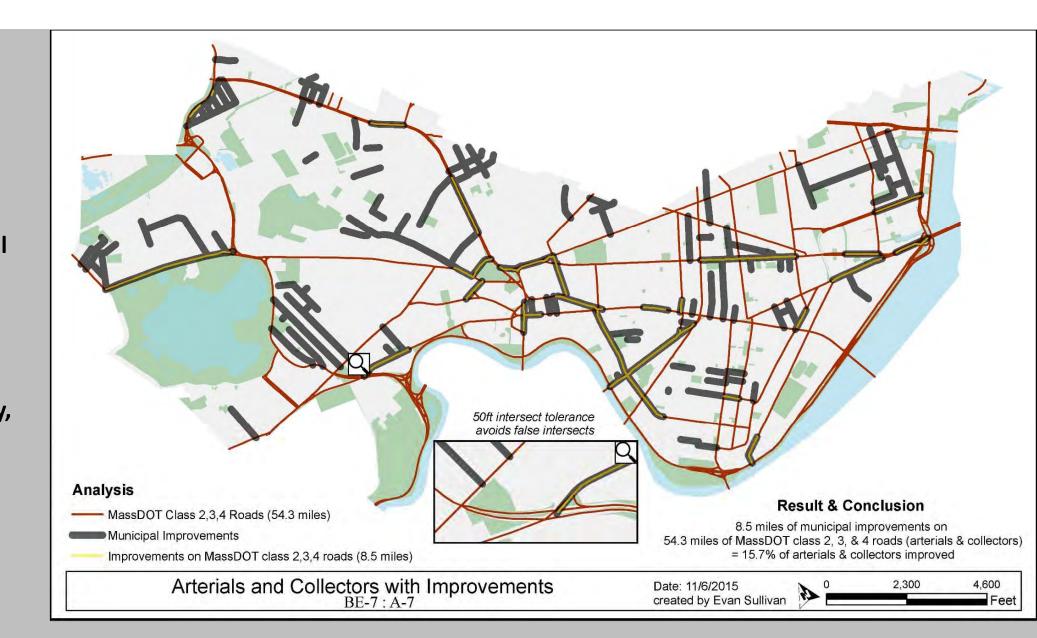

#### **Proximity to Open Space:**

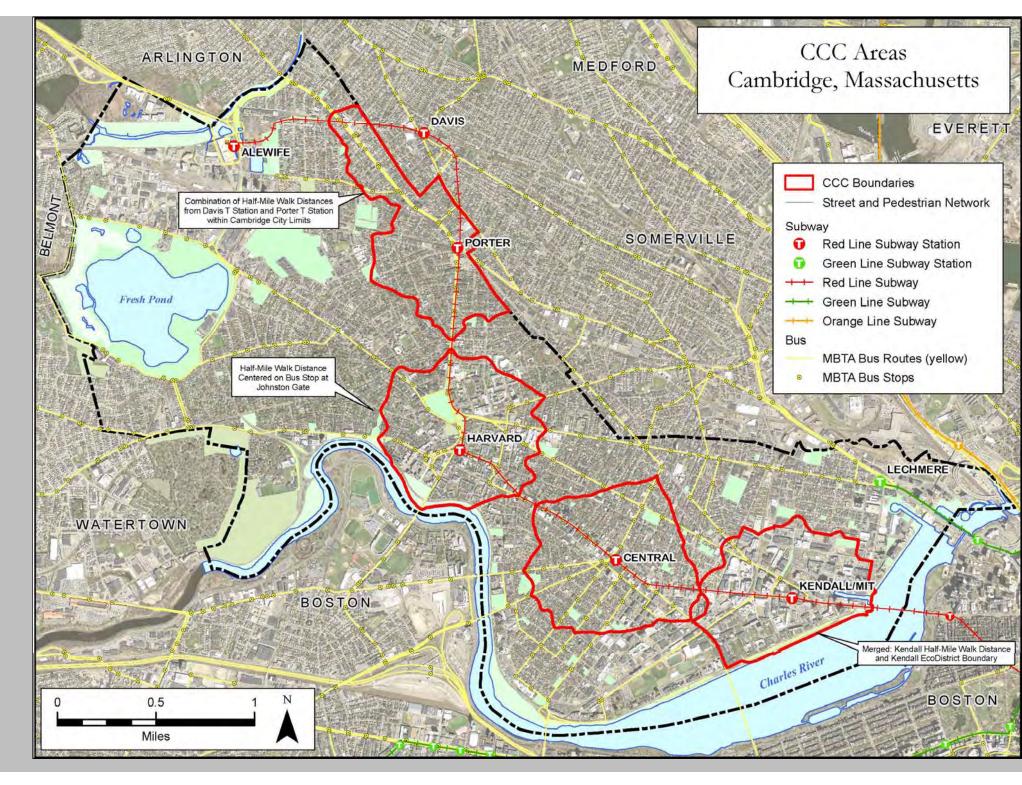

Determined planning and robust investment has resulted in 100% of all Cambridge residents living within a ¼ mile walk to the entrance of public open space or parkland, far exceeding the STAR standard of 85% for high-density cities.

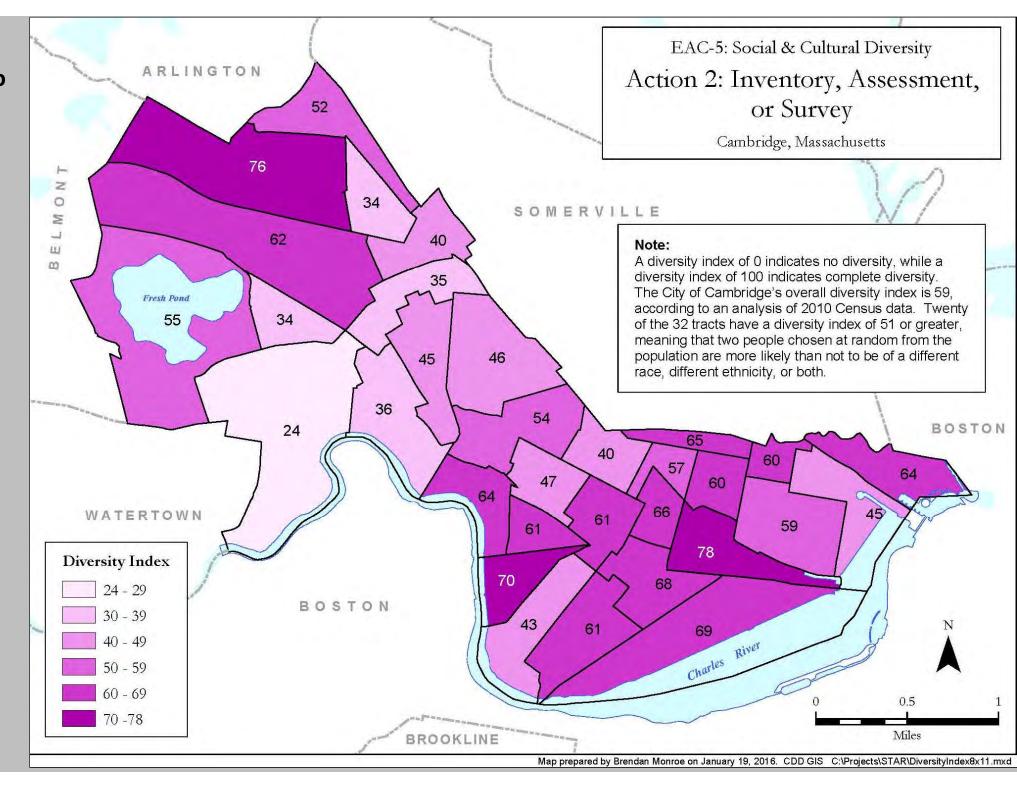

An essential component of providing transportation choices and alternatives is creating, maintaining and enhancing and supporting infrastructure. A central goal of Cambridge's Complete Streets plan is expanding and improving the city's sidewalks to increase connectivity and accessibility, thereby making the city a more welcoming place for pedestrians.

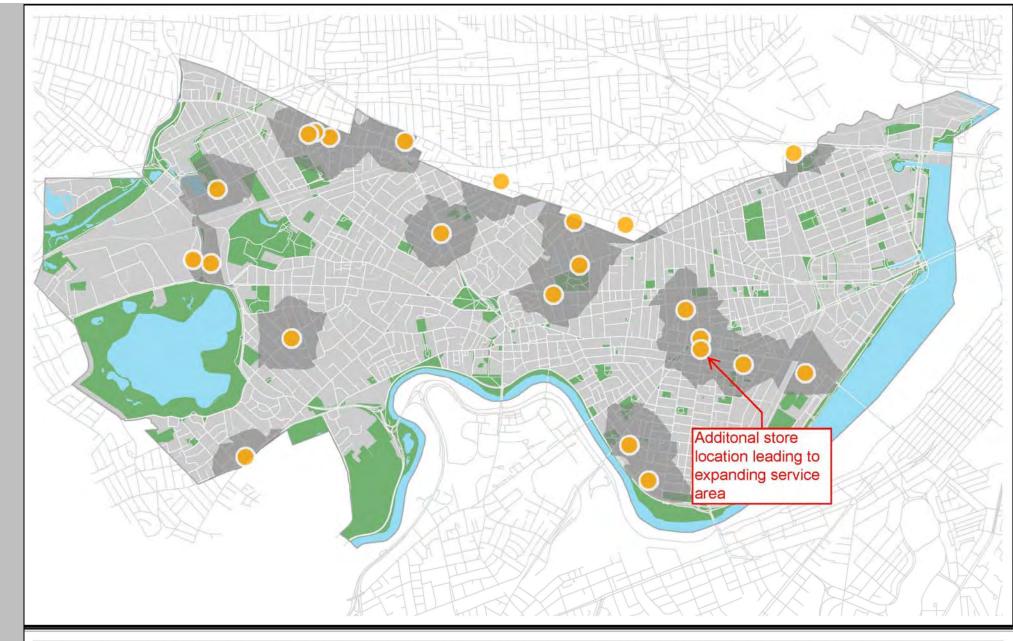

# Compact & Complete Communities are walkable ½-mile areas around a central point that represent the community's strongest mix of uses, transit availability, density, and walkability while maintaining geographic diversity.

The Diversity Index is used to analyze the effectiveness of policies, programs, service delivery, and infrastructure investments

Cambridge residents with walkable access to Healthy Food Options increased by 10% from 2011 to 2014. Healthy Food Options mean retail outlets with a diverse offering of produce, dairy and other fresh and healthful foods.

### Access to Healthful Food in 2014

Date: 11/2/2015

Prepared by Erin Coutts & Evan Sullivan
Data: City of Cambridge & U.S. Census Bureau

HS-4 Outcome 3

2,800 5,600 Feet **Green Infrastructure is the** network of protected vegetated surfaces and tree canopy in a community that serves to mitigate heat, help manage water in the community and provide recreational opportunities for residents. Cambridge exceeded the STAR standard of 35% coverage, with over 38% of the city's surface area being covered by some form of green infrastructure.

### **Resource Protection.**

Since 2003 the city has protected or restored all existing wetlands, and has even increased wetland areas by over four acres with constructed wetland projects at North Point, Discovery Park, Alewife Brook and Fresh Pond Reservation.
