ABOUT THE DATA SOURCES USED HERE

The primary data source for many of the tables included in this document is the U. S. Census Bureau. Three different Census programs inform these tables. The Decennial Census, held once every ten years, provides basic population and household data. Up until 2000 the Decennial Census also sampled one in six persons to ask a wide variety of socioeconomic questions. Following the 2000 Census, the socioeconomic questions were moved to the new American Community Survey (ACS). Unlike the Decennial Census, the ACS is an ongoing sample based survey. Tables are released for different timeframes every year. Most of the ACS data used here is drawn from the three year 2007 to 2009 ACS tables, which provide the best combination of recent data and margin of error for many tables found in this document.

The Census Bureau designed the ACS to measure characteristics of a population but not the size of the population itself. The tables in this document that derive from Census Bureau data and that provide specific population numbers for a year more recent than the 2000 decennial census do so by combining ACS characteristics data with information from the Census Bureau Population Estimates Program. This third Census program estimates population size using the most recent decennial census and administrative records.

GLOSSARY

This document employs a number of terms used in specific manners in relation to the collection of U. S. Census data. A number of these terms are defined below. For more detailed information and for definitions of further terms, please review “Appendix B Definitions of Subject Characteristics” in both of the following U. S. Census Bureau publications:

- [Summary File 1 2000 Census of Population and Housing Technical Documentation](#)
- [Summary File 3 2000 Census of Population and Housing Technical Documentation](#)

In depth definitions of terms used by the American Community Survey can be found on the ACS web site:

- http://www.census.gov/acs/www/data_documentation/documentation_main/

College Dormitory - Includes dormitories in which college students reside (provided the dormitory is restricted to students who do not have their families living with them), fraternity and sorority houses, and on-campus residential quarters used exclusively for those in religious orders who are attending college. College dormitory housing includes university-owned on-campus and off-campus housing for unmarried residents.

Family - A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family.

Group Quarters - The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized: (1) the institutionalized population and (2) the noninstitutionalized population, including College Dormitories.

Hispanic - are those whose origins are from Spain, the Spanish-speaking countries of Central or South America, the Dominican Republic, or people identifying themselves generally as Spanish, Spanish-American, Hispanic, Hispano, Latino, or with a similar term.

Household - A household includes all of the people who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Householder - One person in each household is designated as the householder. In most cases, this is the person, or one of the people, in whose name the home is owned, being bought, or rented. If there is no such person in the household, any household member 15 years old or over could be designated as the householder.

Housing Unit - A housing unit may be a house, an apartment, a mobile home, a group of rooms or a single room that is occupied (or, if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall.

Income - For Census purposes income includes wage or salary income; net self-employment income; interest, dividends, and net rental or royalty income or income from estates and trusts; social security or railroad retirement income; Supplemental Security Income (SSI); public assistance or welfare payments; retirement, survivor, or disability pensions; and funds from similar sources. The following sources are excluded from income: capital gains, money received from the sale of property unless engaged in the business of selling such property; the value of income "in kind" from food stamps, public housing subsidies, medical care, employer contributions for individuals, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; and gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Industry - Industry relates to the kind of business conducted by a person's employing organization.

Median - A statistical term measure that divides a distribution of values into two equal parts: one-half of the cases fall below the median value of a range and one-half above the median. In the case of a distribution of values with an even number of members, the median is the average of the two middle values.

Occupation - Occupation describes the kind of work a person does on the job.

Racial Groups - The concept of race, as used by the Census Bureau, reflects self-identification by people according to the race or races with which they most closely identify. Please review "Appendix B Definitions of Subject Characteristics" in the publication [Summary File 1 2000 Census of Population and Housing Technical Documentation](#) for further information and for detailed definitions of races.

1. Includes persons of Asian or Pacific Islander descent, who were included in "Other" category prior to 1970.
2. Includes persons of Native American descent, as well as persons who report their race as "Other". For 2000 Census, includes persons who selected two or more races. Census 2000 was the first census to allow persons to report more than one race. Due to this change in methodology, racial statistics reported from Census 2000 lack a one-to-one comparison with those reported by any previous Census.

1. Figures do not sum to total population. For 1980 and 1990 both American Indian persons of Hispanic origin and Asian persons of Hispanic origin are double counted. For 2000 Asian persons of Hispanic origin are double counted.

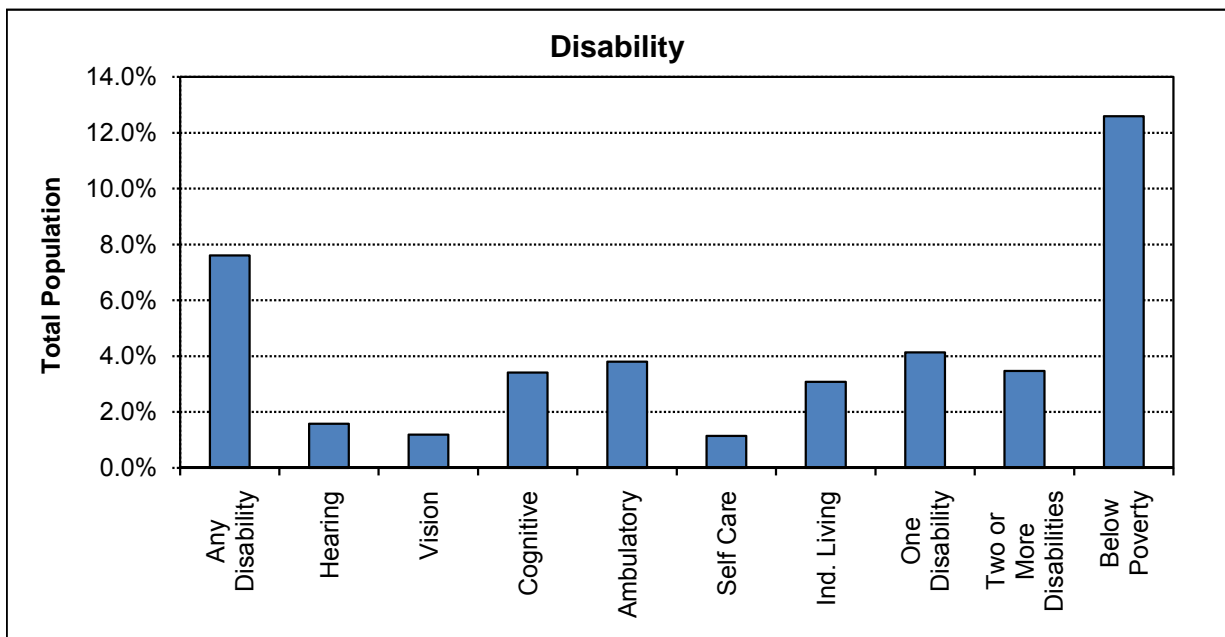

2. Includes persons who are not of Hispanic origin and reported race as "Other" or, in the case of the 2000 Census, reported two or more races.

1. Foreign Born refers to those persons who were not United States citizens at the time of birth. This excludes those born in the United States, Puerto Rico, or U.S. island areas, as well as persons born in a foreign country who have at least one parent who was a United States citizen at the time of birth.
2. 1950 figure for Foreign Born is for whites only. 1950 Native Born figure includes all native born whites and all non-whites, regardless of place of birth.

2. Household Income and Per Capita were not calculated by the Census Bureau prior to the 1980 census.
3. Per capita income represents the average income of all residents, regardless of group quarters status.
4. The 2007-9 figures are from the American Community Survey, which measures income by asking respondents about income over the twelve month period preceding the survey. Other results here are from the decennial census, which measured income by asking about earnings during the prior calendar year.

1. These figures are based upon a census tract level analysis of Census information performed for HUD using data either from the decennial census or the American Community Survey (2005 - 2007). Income levels are based upon the median income for the Boston MA-NH PMSA, as calculated by HUD for the purposes of managing affordable housing programs. Adjustment is made for average household size in the census tract. Only persons living in households are evaluated for income level; no group quarters occupants are evaluated.
2. Very low income as defined as less than 30% of the area median income
3. Low Income is defined as greater than 30% up to 50% of area median income.
4. Moderate Income is defined as greater than 50% up to 80% of area median income.
5. For the purposes of this chart, higher income is defined as 80% or greater of the area median income.

1. The Census Bureau uses income thresholds that vary by family size and composition to determine who is poor. Poverty thresholds do not vary geographically. They are updated annually for inflation using the Consumer Price Index. The official poverty definition counts money income before taxes and does not include capital gains or noncash benefits. Poverty is not defined for people living in college dormitories, institutional group quarters such as jails or nursing homes, or for unrelated individuals under age 15. The 2008 poverty threshold for a 3 person household with two children under 18 was \$17,346.
2. These figures are compared to the counts of families or families with related children as stated in the poverty tables. These counts differ from those used elsewhere in this document, which were developed using decennial census short form data, unlike the poverty tables which derive from long form data.

1. For 1950 and 1960 all figures in this table are based on residents 14 and older, unless otherwise stated. 1970 through 2000 figures are based on residents 16 or older, unless otherwise stated.
2. The Labor Force is composed of all persons, except as noted in footnote 1, who work or are currently seeking work. The Labor Force Participation Rate is the fraction of Potential Workers who belong to the Labor Force.
3. For 1950 and 1960 all figures are based on all female residents 14 and older, unless otherwise stated. 1970 through 2000 figures are based on all female residents 16 or older, unless otherwise stated.
4. The unemployment rate stated here is calculated by comparing the number of unemployed persons detected by the U. S. Census to the civilian labor force, which in the case of Cambridge is slightly smaller than the total labor force. The civilian labor force does not include residents who actively serve as members of the armed forces. Note that the unemployment rate used here differs significantly from the rate distributed by the U. S. Department of Labor and the Massachusetts Executive Office of Labor and Workforce Development how (MA EOLWD) both in the number is calculated and the result. For example, according to the MA EOLWD the citywide rate at the time of the 2000 U. S. Census was 1.3%, at the time of 1990 U. S. Census the rate was 3.4%, and in 1980 the annual average was 5.1%. (See page ___ for MA EOLWD rates.)
5. For 1950 the figure reported is Persons Not in Labor Force for reasons "Other and Not Reported." The majority of these persons are assumed to be college students.
6. For 2000 includes persons with an employment disability who are unemployed.

1. 1990 was the last Census to use the Standard Industrial Classification (SIC) system to classify employment data. The 2000 Census saw the introduction of the North American Industrial Classification System (NAICS). As a result, data reported from 1990 and earlier are not comparable to 2000 Census results.
2. The Employment by Sector and Occupation totals for 1950 are not equal due both to persons who did not report an occupation and to a data reporting error.

1. The unemployment rates in this table are not seasonally adjusted.
2. The figures here are an alternative measure of labor underutilization tracked by the U. S. Bureau of Labor Statistics. The U-6 rate includes "total unemployed, plus all persons marginally attached to the labor force, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all persons marginally attached to the labor force." In practical terms, the U6 rate includes all unemployed persons who are seeking a job, those who work part-time because no full time job is available, and those who are not currently looking work but would do so if they thought jobs were available. All figures are seasonally unadjusted annual averages.

- Steps taken by the Census Bureau to protect individual confidentiality by suppressing data affect the accuracy of the only "worker flow" table to separate bicyclers, walkers, and several other "minor" modes of commuting. Thus, the 2000 Census does not provide accurate or useful individual figures for the "Bike", "Walk" and "Other" modes. The figures used here come from an analysis that weights various factors to generate useful mode splits for worker flows from different locations. As such, they do not have the same level of rigor as figures for the total labor force regardless of home location.
- Abutting towns include Arlington, Belmont, Boston, Brookline, Somerville, and Watertown.

1. Includes all market rate and affordable housing, including housing owned by non profit organizations. Includes family style housing operated as dormitories by Harvard and MIT, which are counted as housing units by the U. S. Census. Note that the method used to develop these figures differs from that used in previous years and from the method used by the U. S. Census Bureau. Also note that the figures here refer to buildings and not to parcels of land.

2. Includes only nontaxable graduate student housing owned by Harvard University or MIT.

1. These numbers are not constructed using the same methods as *Banker & Tradesman* and cannot be used to make comparisons with figures reported by that publication.
2. Income required assumes 10% downpayment, 5.5% interest rate, 30 year financing, no Private Mortgage Insurance, real estate taxes at then current residential rate. Insurance and condo fees vary, increasing over period. Two family "Income Required" assumes availability of 75% of monthly rent payment, which varies between \$950 to \$1,800 over the period analyzed.
3. HUD estimated figures for Boston-Cambridge-Quincy MA HMFA. The geographic definition of statistical areas changes over time. The standard of comparison used here is Metropolitan Statistical Area or major subdivision thereof that includes Cambridge.
4. HUD's methodology changes from time to time, affecting the comparability of figures from different periods. Note that figures used here are estimates; they are not taken directly from a survey of households.
