Chapter 15.22
Outdoor Lighting

Section 15.22.010 Short Title. This Ordinance may be cited as the “Outdoor Lighting Ordinance” of the City of Cambridge (the “City”).

Section 15.22.020 Purpose. The purpose of this Outdoor Lighting Ordinance is to regulate outdoor lighting, as defined in this Ordinance, in the City, the intent being to permit an amount of outdoor lighting that is appropriate to allow for the safe use and enjoyment of outdoor areas, while also mitigating potential nuisance in the form of light trespass and glare to abutters and the public at large, reducing light pollution, and promoting energy conservation.

Section 15.22.030 Definitions.

A. Architectural lighting means lighting designed to reveal architectural beauty, shape and/or form and for which lighting for any other purpose is incidental.

B. Color rendering index means a measure of the degree of color shift objects undergo when illuminated by the light source as compared to those same objects when illuminated by a reference source of comparable color temperature.

C. Correlated color temperature ("CCT") means the absolute temperature of a blackbody radiator whose chromaticity most nearly resembles that of the light source, a specification of the color appearance of the light emitted by a lamp, relating its color to the color of light from a reference source when heated to a particular temperature, measured in degrees Kelvin (K). [RPI Color Research Center]

D. Emergency lighting conditions means lighting that is only activated during an emergency; lighting fed from a backup power source; lighting for illuminating the path of egress solely during a fire or other emergency situation; or, lighting for security purposes used solely during an alarm.

E. Fully shielded light fixture means a light fixture constructed and installed in such a manner that all light emitted by the light fixture, either directly from the lamp or a diffusing element, or indirectly by reflection or refraction from any part of the light fixture, is projected below the horizontal plane through the light fixture's lowest light-emitting part.

F. Glare means lighting entering the eye directly from luminaires or indirectly from reflective surfaces that causes visual discomfort or reduced visibility. [The sensation produced]
by a bright light source within the visual field that is sufficiently brighter than the level to which the eyes are adjusted, causing discomfort and/or loss in visual performance or visibility.

**G.F. High Intensity Discharge ("HID")** means a discharge lamp where the emitted energy (light) is produced by the passage of an electric current through a gas. HID includes mercury, metal halide, and high pressure sodium ("HPS") lamps.

**H.G. Lamp** means a source of optical radiation, often called a "bulb" or "tube," such as incandescent, fluorescent lamps, high-intensity discharge ("HID") lamps, and low pressure sodium ("LPS") lamps, as well as light-emitting diode ("LED") modules and arrays.

**H. Landscape lighting** means lighting of trees, shrubs, or other plant material as well as ponds and other landscape features. Lighting which is positioned and aimed to illuminate foliage, yards, gardens, sculptures, driveways, walkways, patios, decks and other exterior areas.

**I. Light bulb. See “Lamp”** means the element within a light fixture that directly produces light, and, as used in this Ordinance, is synonymous with lamp or tube.

**K. Light fixture. See “Luminaire”** means a complete lighting unit consisting of one or more light bulbs together with the parts designed to distribute the light, to position and protect the lamps and to connect the lamps to the power supply. Sometimes this includes ballasts or drivers, and photocells. For the purpose of this Ordinance, light fixture shall be synonymous with luminaire. A complete lighting unit consisting of one or more electric lamps, the lamp holder or holders, reflector, lens, diffuser, ballast, and/or other components and accessories, but excluding the support assembly. For purposes of determining total light output from a luminaire, lighting assemblies which include multiple unshielded or partially shielded lamps on a single pole or standard shall be considered as a single unit.

**L. Light trespass** means lighting that falls beyond the boundaries of the property it is intended to illuminate.

**M. Lighting** means electric, man-made, or artificial lighting. See lighting equipment.

**N. Lighting equipment** means equipment specifically intended to provide gas or electric illumination, including but not limited to, lamp(s), luminaire(s), ballast(s), poles, posts, lens(es), electrical wiring, and related structures or other necessary or auxiliary components.

**O. Lighting plan** means a site plan depicting the property lines of all properties for which lighting is proposed, the location and label specification of all exterior luminaire light fixtures to be installed within the property, their lumen values, mounting heights, shielding and directionality, controls and the location of all adjacent streets, the uses of abutting properties and properties located directly across a street, any relevant project site conditions,
vertical illuminance calculations, and any additional information required to demonstrate compliance with applicable standards.

P. **Lighting pollution** means adverse effects of lighting, as defined in this Ordinance, including, but not limited to, glare, light trespass, sky glow, energy waste, compromised safety and security, and impacts on the nocturnal environment.

Q. **Lighting Zone ("LZ")** means an overlay zoning system establishing legal limits for lighting for particular parcels, areas, or districts in a community.

Q-R. **Low Pressure Sodium ("LPS")** means a discharge lamp where the light is produced by radiation from sodium vapor at a relatively low partial pressure (about 0.001 torr). LPS is a “tube source” and is monochromatic light.

R.S. **Lumen** means the unit of measure used to quantify the amount of light produced by a lamp or emitted from a luminaire-light fixture (as distinct from “watt” or other measure of a lamp’s power consumption).

S.T. **Luminaire,** See “Light Fixture,” means a complete lighting fixture, consisting of a lamp, or lamps and ballast(s) (when applicable), together with the parts designed to distribute the light from the fixture (i.e., reflector, lens, diffuser), to position and protect the fixture, and to connect the fixture to the power supply.

T.U. **Lux** means the SI unit of illuminance. One lux is one lumen per square meter. 1 Lux is a unit of incident illuminance approximately equal to 1/10 footcandle. (One lux equals approximately 1 footcandle, the unit of measure for illuminance on a surface one square meter in area on which there is a uniformly distributed flux of one lumen, or the illuminance produced at a surface all points of which are at a distance of one meter from a uniform point source of one candela, unit of measure used to quantify the intensity, as perceived by the human eye, of visible light hitting or passing through a surface. One lux designates the intensity of one lumen uniformly distributed across one square meter.

U.V. **New lighting** means lighting for areas not previously illuminated, or newly installed lighting of any type, except for replacement lighting or lighting repairs.

W.X. **Outdoor or exterior lighting** means lighting equipment installed within the property line and outside the building envelope, as defined by the International Code Council, of a subject property, whether attached to poles, building structures, the earth, or any other location, and any associated lighting control equipment.

W.X. **Partly shielded light fixture** means a light fixture with opaque top and translucent or perforated sides, designed to emit most light downward.
Section 15.22.040 Effective Date. This Ordinance shall take effect on three (3) months from the date of enactment.

Section 15.22.050 General Requirements.

A. Conformance with all Applicable Codes. Except as otherwise provided in this Ordinance, all outdoor lighting (including, but not limited to luminaires, light fixtures, lamp equipment, etc.) shall be installed in conformance with all applicable federal, state, and local laws, rules, and regulations, including, but not limited to, applicable sections of the Massachusetts Building Code, the Cambridge Zoning Ordinance, and the Cambridge Municipal Code.

Commented [L19]: It was suggested that seasonal lighting have a lumen limit such as in the MLO. MLO definitions limit it to 70 lumens. MLO is silent about length of time and when during the calendar year seasonal lighting is allowed. I believe the ordinance should be as well since we may not want to dictate when people feel there traditions or holidays are. We are referencing back to 7.20 which notes "except temporary holiday lighting in use for not longer than a four week period in any calendar year".

Commented [L20]: Carol Lynn suggests striking “any”, for “more than one” Checking with Parsons about word additions.

Commented [L21]: Do we want to stay with the same guidelines as Zoning Ordinance 7.20 for ALL districts? Currently 7.20 only restricts timeframe for Residence A, B, C, and C-1 districts to no more than 4 weeks in a calendar year. I would prefer this than a timeframe (i.e., Nov-Jan 1).

Commented [L22]: Carol Lynn suggested edit, but concern is dictating people's holidays and traditions.

Commented [L23]: Carol Lynn suggests striking "any", for "multiple". She also suggests adding wording "above the horizontal plane of lamp" but unsure that is accurate definition. Current definition is sourced directly from Model Lighting Ordinance.

Commented [L24]: Carol Lynn suggestion. Horizontal illuminance is NOT mentioned in LEED and therefore, we suggest NOT adding it, since it is not referenced elsewhere in the ordinance.

Commented [L25]: Carol Lynn suggested we strike, however this is an addition of the Legal Staff and will not be removed.
B. Applicability. Except as set forth in this Ordinance, all outdoor lighting installed after the effective date of this Ordinance shall comply with the requirements of this Ordinance. This includes, but is not limited to, new lighting, replacement lighting, replacement lamps or light bulbs or any other lighting whether attached to structures, poles, the earth, or any other location, including lighting installed by any third party that receives an electrical permit from the City’s Inspectional Services Department. Except as otherwise provided in this Ordinance, all outdoor lighting installed prior to the effective date of this Ordinance shall be altered or replaced so as to comply with these requirements within five (5) years of the effective date of this Ordinance.

C. Replacement of Light Fixtures and Light Bulbs. When any outdoor light fixture is replaced, the replacement light fixture shall comply with this Ordinance. Where a light bulb is replaced within an existing non-compliant light fixture, and the light fixture itself is not replaced or repaired aside from the replacement of the light bulb, the light fixture may remain provided that the replacement light bulb is compliant with the applicable initial lumen standards or vertical illuminance standards set forth in this Ordinance, and provided that the light fixture is not otherwise altered to be in greater non-compliance with the requirements of this Ordinance.

C.D. Interim Modifications. Within six months of the effective date, property owners and/or lessees must rectify simple light trespass violations that can be solved or substantially ameliorated by one or more of the following: (1) a change of bulb, (2) change of angle, (3) addition of manufacturer approved shielding, or (4) replacement, at a product cost of less than $200. An electrical permit fee may be waived for this procedure.

D.E. Light Color. 1. Correlated color temperature of any outdoor light source shall not exceed 4000 Kelvin.
2. Color rendering index of any outdoor light source shall not be less than 65.

F. Automatic shut-offs. In residential districts, automatic lighting shut-off controls (daylight sensor or time clock) are required with new or replacement light fixtures.

E.G. Prescriptive Standards. For any properties under XXX square feet, exterior lighting that meets the standards set forth in the table below shall be permitted in the City. Any lighting that does not meet the standards set forth in the table below may be permitted in the City only if it meets the Alternative Performance Standards set forth in this Ordinance. In addition, total lumens for a property are limited to XXXX.

<table>
<thead>
<tr>
<th>Outdoor Lighting Category</th>
<th>Maximum Initial Lumens Per Light Fixture</th>
<th>Maximum Height</th>
<th>Shielding and Direction</th>
</tr>
</thead>
</table>

Commented [L26]: Carol Lynn suggested strike, however this is an addition of the Legal Staff and will not be removed.

Commented [L27]: A balance between “interim modifications” (see below) and 5 years. For small commercial users, 5 years in a minimum lease term.

Commented [L28]: Carol Lynn suggested the addition, “In particular circumstances, timelines remedies may be sought and incentivized.” However legally we cannot include this in an ordinance. Let’s discuss how we can incorporate this into the webpage and educational/marketing materials.

Commented [L29]: Alternatively this is the language Boulder used: “Replacement of Bulbs: To the extent that compliance with this section can be achieved by replacement of a light bulb, the light bulb shall be replaced with one that meets the requirements of this section upon its failure or by (DATE) whenever is earlier.
• Aiming of Fixtures: To the extent that compliance with this section can be achieved by re-aiming a fixture, such fixture shall be re-aimed by (DATE).

Commented [L30]: Carol Lynn’s suggested addition. Need to confirm with Legal staff that we can add this. I think 1 and 2 might be doable, however 3 affects warranty/fire safety and 4 - $200 is a lot of money to some of us and I am not overly comfortable requiring it. Finally, the City Manager can agree whether or not to waive permitting fees. If we decide to waive fees, we would likely NOT include the language in the ordinance, since after a period of time, it won’t make sense and we’d have to update the ordinance. We would rather, include it in the marketing materials should City Manager agree. Current fee is $1 per fixture with a $25 minimum (soon to be $50) for residential.

Commented [L31]: We can add encouragement to go lower on webpage and marketing materials but not in ordinance per Legal staff.

Commented [L32]: We can delete this is not desired. We were looking for energy savings here. Task Force members can decide whether to keep it or not. We can expand to all properties, however new building code already requires auto shutoffs for commercial properties so we would just reference that in the ordinance. It is not cost prohibitive based on our research.

Commented [L33]: We MAY be able to tie this into our Green Building Review process which is triggered for buildings over 25,000 SF. Would this then be the better size trigger since we would have another bite at the apple – in the sense that we would be adding a review process above and beyond the permitting with ISD???

In addition, based on research 10,000 SF is only used as a trigger for housing (incentive zoning) and nowhere else (FYI only).

Commented [L34]: Point of concern, lumen limits are difficult in urban environments where you have properties at varying depths of setback. Dark skies references acreage for urban areas but we can’t measure it that way.
### E. Alternative Performance Standards

An outdoor lighting installation may only exceed the limitations set forth in the Prescriptive Standards in this Ordinance if the lighting complies with the Alternative Performance Standards in this Ordinance. Any properties may follow the Performance Standard, however all properties over XXX square feet must comply with the Alternative Performance Standards.

#### 1. Standards

a. All lighting shall have no light emitted above the height of the light fixture, with the exception of lighting that is used solely for façade and landscape lighting, provided that such lighting shall not exceed 620 lumens per light fixture.

b. The maximum allowable vertical illuminance value shall be eight (8) lux at the perimeter of the lot, which shall be measured as follows. For portions of the lot abutting another lot under separate ownership (i.e., a side or rear lot line), the vertical illuminance shall be measured at 5 feet in height or above in the plane of the property line. For portions of the parking area, driveway or loading bay.

<table>
<thead>

<th>Unshielded or partly shielded light fixture (general)</th>
<th>300</th>
<th>12 feet above the surface of the area to be illuminated</th>
<th>Not applicable</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unshielded or partly shielded light fixture located in a front yard between the building and street</td>
<td>630</td>
<td>12 feet above the surface of the area to be illuminated</td>
<td>Not applicable</td>
</tr>
<tr>
<td>Fully shielded or shielded directional light fixture for entries, walkways, open spaces or buildings</td>
<td>1,050</td>
<td>12 feet above the surface of the area to be illuminated</td>
<td>Must be fully shielded or directed away from all properties that are abutting or located directly across a street</td>
</tr>
<tr>
<td>Fully shielded or shielded directional light fixture for automobile surface parking areas, driveways or outdoor loading bays</td>
<td>1,260</td>
<td>14 feet above the surface of the parking area, driveway or loading bay</td>
<td>Must be fully shielded or directed away from all properties that are abutting or located directly across a street</td>
</tr>
</tbody>
</table>

Commented [L35]: Carol Lynn wants to ensure we don’t undermine Zoning Ordinance Articles 6.41, 6.46, 6.93. We are checking to ensure that we will be able to keep the zoning language. The draft ordinance is MORE strict than that currently suggested in 6.46 of “. A recommended standard for lighting is a minimum intensity of one (1) foot candle on the entire surface of the parking facility” It doesn’t have a maximum. This ordinance will not supersede 6.41, 6.46, 6.93. People will have to follow BOTH which is why it is referenced throughout.

Commented [L36]: We MAY be able to tie this into our Green Building Review process which is triggered for buildings over 25,000 SF. Would this then be the better size trigger since we would have another bite at the apple – in the sense that we would be adding a review process above and beyond the permitting with ISD.
lot abutting a street, the vertical illuminance shall be measured at any point 5 feet in height or above in the plane of the centerline of the street.

c. As an alternative to the requirements described in paragraphs 1 and 2 above, the project must meet the requirements of the Light Pollution Reduction credit of the U.S. Green Building Council’s LEED v4 BD+C rating system, or it may be amended from time to time.

2. Application Requirements. In order to apply the Alternative Performance Standards, a lighting plan as defined in this Ordinance must be prepared by a registered architect or professional engineer licensed in the Commonwealth of Massachusetts, and submitted to the Inspectional Services Department with accompanying calculations certifying that the lighting depicted in the lighting plan shall conform to the Alternative Performance Standards set forth in this Ordinance. The Alternative Performance Standards shall not be applied unless such a lighting plan has been approved by the Commissioner of Inspectional Services or her/his designee.

F. Exemptions from Applicability.

1. Lighting within public ways for the principal purpose of illuminating public ways. No exemption shall apply to any lighting within a public way when the purpose of the luminaire-light fixture is to illuminate areas outside the public way, other than as provided in this Ordinance.

2. Lighting for public parks or public art that is commissioned, owned, or operated by a city, state, or federal entity, or that is required by the City by special permit, or otherwise by law to be accessible to the general public.

3. Lighting for public monuments, statuary, or the national flag.

4. Architectural lighting that has received a Certificate of Appropriateness from the Cambridge Historical Commission or a Neighborhood Conservation District Commission.

5. Architectural lighting of structures or buildings listed on the National Register of Historical Places.

7. Temporary lighting for theatrical or television production, or performance areas, if an electrical permit has been received from the City’s Inspectional Services Department.
8. Temporary lighting for work areas at construction sites, if an electrical permit has been received from the City’s Inspectional Services Department.

9. Underwater lighting in swimming pools and other water features.

10. Temporary lighting or seasonal lighting as defined in this Ordinance.

11. Lighting for hospital emergency departments, including associated helipads.

12. Lighting that is only used under emergency conditions.

13. Lighting required by federal, state, or local laws, rules or regulations.

Section 15.22.060 Administrative Exemption. The Commissioner of Inspectional Services shall have the authority to grant a partial or complete waiver of the requirements of this Ordinance where the property owner has submitted an Application for Administrative Exemption demonstrating that: 1) bringing the source of light for which the administrative exemption is sought into compliance with this Ordinance would constitute a demonstrably unreasonable hardship on the applicant; or 2) bringing the source of light for which the administrative exemption is sought into compliance with this Ordinance would result in conditions that are detrimental to public health, safety, or welfare. The property owner seeking the administrative exemption shall file the Application for Administrative Exemption with the Inspectional Services Department demonstrating one of the two requirements for an administrative exemption listed above.

Section 15.22.070 Enforcement.

A. Enforcement Officials. The Commissioner of Inspectional Services or her/his designee shall be the authorized enforcement personnel charged with the enforcement of the provisions of this Ordinance.

B. Violations. Authorized enforcement personnel may order and specify remedial actions to be taken by a violator of this Ordinance to achieve compliance, or issue citations, pursuant to G. L. c. 40, § 21D, for violations of these provisions, assessing fines of three hundred dollars for each such violation. Each day such a violation continues shall constitute a separate offense. Additionally, any person found to be in violation of any of the provisions of this Ordinance may be prosecuted for a misdemeanor and upon conviction thereof shall be fined three hundred dollars for each such misdemeanor.

C. Injunction. As an additional remedy, any outdoor lighting installed or maintained in violation of any provision of this Ordinance may be subject to abatement summarily by a restraining order or injunction issued by a court of competent jurisdiction.
D. Suspension or Revocation of Permit. As an additional remedy, any enforcement official hereunder may summarily suspend, and after a hearing may revoke, any license or permit, including a building, demolition, or electrical permit.
