Transportation Logistics Plan

To: City of Cambridge Planning Board

From: Chauncy Spencer Date: April 1, 2021

Subject: Ivy League Technologies, LLC Proposed Adult-Use Cannabis Retail -

Sankofa

CC: Adam Shulman

Ivy League technologies, LLC ("the Applicant" or "the Company") has completed a Transportation Logistics Plan in order to determine potential impacts associated with the proposed cannabis (Sankofa) to be located at 95 First Street in Cambridge, Massachusetts (hereafter referred to as "The Project"). The purpose of this memorandum is to identify available public transit options, evaluate parking supply/demand, evaluate loading/delivery areas and the impacts on nearby streets, sidewalks, estimate traffic volumes expected to be generated by the proposed facility, and articulate a Transportation Demand Management (TDM) Plan ("The Plan") for customers, employees, and delivery/loading activities, in order to minimize Project impacts. The general scope of this assessment is outlined in the City of Cambridge Transportation Logistics Plan Guidelines.

PROJECT DESCRIPTION

The proposed Project will consist of a 4575 sq. ft (gross leasable space) cannabis dispensary. The driveway provides access to 11 parking spaces. The facility will be opened seven days a week from 10:00 AM to 11:00 PM Monday through Friday, 10:00 AM to 11:00 PM Saturday and, 11:00 AM to 8:00 PM Sunday. Vehicular access to the site is by way of a curb cut on Hurley Street. The public entrance that faces First Street has an 11 foot sidewalk including the 3.5 foot setback. The rear entrance has a 5 foot wide walkable pathway along the width of the building with bollards separating the vehicle traffic in parking lot from the walkable path. The dispensary will have nine registers with employees working in on the sales floor with handheld devices to expedite ordering, and at the door to manage the queuing system to ensure the building does not exceed capacity (56 customers).

INTRODUCTION

Contained in The Plan is comprehensive field inventory of available public transit options, parking supply and demand, loading zone, pedestrian, and bicycle facilities within the study area surrounding 95 First Street. In The Plan the Applicant will be, due to COVID-19 restrictions on area businesses at the time of this study, will attempt to draw conclusion based on the Applicant's own parking observations on November and December of 2020. Also The Plan includes references to a memorandum^[1,] that compiles trip generation studies, mode shares studies, and related calculations and The Plan uses these to arrive at estimates for the proposed dispensary. The Plan has an overlaid 500-foot radius (the area of impact) around The Project site on the maps which will be **The Context**. **Appendix 1 – 4 of Volume 3** depicts a survey of the inventory discussed. The existing conditions of the

lot and adjacent sidewalks, streets, and curb regulations on both sides of the street are detailed in the graphics A001.01 and A001.02 of Volume 2.

PEDESTRIAN AND BICYCLE FACILITIES

The Project site is conveniently located in a pedestrian-friendly area and will be accessed by customers at the store's front entrance on First Street. The 11 foot wide sidewalk is in the front of the building and 10 foot sidewalks on the Hurley Street side of the building. As mentioned above, there is a 3.5 foot setback in the front of the building, and this stretch of property ensure the smooth ingress of customers, thus ensuring public pedestrian traffic passing by no interference from movement in either direction. In addition, dedicated bike lanes are provided along both sides of First Street which pass directly in the front of the entrance of The Project (see Appendix 1). Available public transit and bike facilities/stations are provided within less than a 2-minute walk. On-site there are 11 short term bicycle parking spaces (see Appendix 2 Figure 2). There are several short term bike racks within 500 ft of The Project locus (see Appendix 3).

PUBLIC TRANSPORTATION SERVICES

The Project site is conveniently located in close proximity to the MBTA Lechmere. As such, a significant portion of employees and customers will utilize transportation to access the site via the routes illustrated in **Appendix 1**. Public transportation services are provided within the study area by the Massachusetts Bay Transportation Authority (MBTA) for Bus service (**see Appendix 3**) and listed below in **Table 1**. Within the study area, the MBTA operates the following bus and subway services:

Table 1
MBTA BUS STATION SERVICE SUMMARY

<u>Route</u>	Stop Closest to Site	<u>Distance From Site</u>	Distance Walking
Inbound	First at Charles Street	479 feet	3 minutes
Outbound	First at Charles Street	400 feet	2 minutes

PROJECT-GENERATED TRAFFIC

Peak hour observations of pedestrian traffic was conducted at the NETA Brookline (an existing and operating cannabis adult-use and medical dispensary) during typical weekday evening peak hours (4:00-6:00 PM) and during typical Saturday midday peak hours (11:00 AM - 2:00 PM). Trip Generation rates per register were developed based upon these citied observations and presented on **Table 7** with background calculations contained in this same publicly available source material ^[1,1] and results were applied to this proposed facility.

Table 4
TRIP GENERATION SUMMARY - 95 FIRST STREET DISPENSARY

Time Period/Direction	Proposed Cannabis Dispensary ^a (9 Registers)	Drive Alone Trip (41%)	Ridesharing Trips (13%)	Transit Trips (16%)	Pedestrian Trips (19%)	Bicycle Trips (6%)	Other Trips (5%)	Total ^b Vehicle Trips
Weekday Evening Peak Hour:								
Entering	152	62	24	20	29	9	8	77
Exiting	<u>152</u>	<u>62</u>	<u>24</u>	<u>20</u>	2 <u>9</u>	<u>9</u>	8	<u>77</u>
Total	304	125	49	40	58	18	15	155
Saturday Midday Peak Hour:								
Entering	117	48	15	19	22	7	6	59
Exiting	<u>117</u>	<u>48</u>	<u>15</u>	19	22	7	<u>6</u>	<u>59</u>
Total	233	96	30	37	44	14	12	119

^aBased on costumer counts conducted at the Existing Cannabis Dispensary in Brookline June 19. Weekday evening peak hour rate = 16.9 costumers per register. Saturday midday peak hour rate = 12.95 costumes per register.

Project-Generated Traffic Summary

The dispensary is predicted to generate approximately 155 vehicle trips (77 vehicles entering and 77 exiting) expected during the weekday evening peak-hour, and 119 vehicle trips (59 vehicles entering and 59 exiting) expected during the Saturday midday peak hour. The vast majority of customers observed stay on the premises no longer than 15 minutes before exiting. Therefore, 15 – 19 parking spaces are demanded every 15 minutes by Sankofa customers. It should be noted that at least 40 percent of the costumers' peak hour trips will be transit, pedestrian and bicycle trips. All other methods of travel by the generated traffic can be supported by the surround transit infrastructure like bike lanes, bike racks, and walkways.

PARKING AND LOADING AVAILABILITY

There are 11 registered spaces behind the building. The proposed loading and delivers will occur in the off-street service area in the rear of the building and is accessed via Hurley Street and delivery vehicles will use customer parking. There will be no need to utilize onstreet loading. The service area for loading trash and deliveries is expected to be utilized 4

^bDrive-alone plus rideshare person trips divided by vehicle occupancy ratio of 1.06 persons per vehicle per American Community Survey 2017 5-year estimates for U.S. Census Tract 3543.

times a week after hours of operation. Unregulated solid waste (i.e., trash) and recyclables will be stored inside the building in wheeled in bins for regularly scheduled collection by a private hauler. All regulated materials will be store in secure quarantine prior to transport by a Cannabis Control Commission licensed transporter for proper disposal or destruction at another Cannabis Control Commission licensed facility. No waste materials of a regulated nature will be stored or contained on the outside/exterior of the facility.

There are several private garages and lots and a municipal garage within a 12 minute walk or less (although, some are not in the 500' radii survey area at the proposed facility). **See Table 5** for a list and distances and **Appendix 2** for illustrations of these distances.

Table 5
PARKING GARAGE OPTIONS

<u>Garage/Lot</u>	<u>Location</u>	<u>Spaces</u>	<u>Distance From Site</u>	Distance Walking

First Street Municipal Garage	7:00 PM	16%	21	1110
Cambridgeside Galleria	7:00 PM	28%	590	2088

Note: Field survey performed in December of 2020

Parking Garage Utilization Summary

It should be noted that the Cambridgeside Galleria Garage parking capacity may be reduced in the near future, so its use for parking consideration may be unpredictable until the developers' plans have materialized. Due to the pandemic's unprecedented impact on businesses and parking demand, using older parking utilization data could be an alternative representation of what parking conditions will be when the dispensary is operational. The Company will not rent parking spaces from private property.

METERED PARKING UTILIZATION SUMMARY

Within the 500 foot Project locus there are 67 metered spots of varying regulations - the Context Map can be found in **Appendix 4** and attached graphics **A001.01** and **A001.02** street sign regulations. **Table 7** contains the Applicant's observed parking utilization for those spaces on one weekday during the hours of 10AM, 12PM, 3PM, 5PM, and 7PM and one Saturday during the hours of 12PM, 3PM, 5PM, and 7PM, which revealed a parking supply of 16, 17, 20, 15, and 18 spaces on the weekday and 17, 7, and 7 spaces during those respective hours.

Table 7

OPENING CONDITIONS OPERATIONS PLAN

Given the possibility of a large crowd during the opening day, the following is being proposed:

- Two managers/employees trained in Crowd Management and certified by the Massachusetts Executive Office of Public Safety and Security will be on-hand for opening week.
- Additional Staff: There will be additional security/concierge specifically focused on managing potential crowds both internally and on the street along the rear of the building. These additional staff member(s) will serve as concierge and will not replace the required security and check-in personnel as required by the CCC regulations.
- There will be a maximum of 56 customers in the facility at any one time. The average customer time in the dispensary will be approximately 10-15 minutes [1.].
- Crowd Management Software/Technology: We will utilize **Faster-Q**, an Appointment Scheduling and Queue Management System designed to allow customers to schedule an appointment on-site, email, QR code, via mobile phone or our website. With queue management software, customers are given a personal wait time forecast. Timely updates and notifications alert customers as they move to the front of the queue. Although maintaining physical lines are a traditional practice, they are no longer necessary. The web-based software will update customers via text messaging and then will notify the customer when it is their turn. The QR code to join the queue with be place on the outside First Street facing window.
- Coordinate with Cambridge Police and TP&T: In advance of its opening day Sankofa will discuss with the Cambridge Police whether any proposed logistics for crowd management are deficient and the Company will share any operational information the police may find useful.
- The Company will place a sidewalk sign on First and Hurley Street indicating that parking is located behind the building.

By being within close proximity to hundreds of under-utilized parking spaces and on a main street corridor, the infrastructure surround the Project location is uniquely positioned to handle a large influx of traffic and parking as the area was designed to support.

TRANSPORTATION DEMAND MANAGEMENT (TDM)

The Applicant will work to encourage mass transit to the establishment – including employees. The Applicant is willing to commit to the following transportation demand management (TDM) measures to ensure that the potential impact to the surrounding roadways is minimized:

- 65% MBTA pass subsidy for full-time employees;
- Implement a pre-order system to reduce in-store time for customers;
- Provide BlueBikes memberships to employees;
- Provide 5 secure, long-term bicycle parking for employees;
- Have an air pump and bicycle repair tools available for employees and customers;
- Provide lockers for employees that walk or bike to work;
- Promote transit and bicycle options online and in marketing material to inform clients and employees of non-vehicular travel options;
- Designate a Transportation Coordinator (TC) to oversee and administer the implementation of TDM measures;
- Conduct employee and customer mode share surveys to provide updates to the City on request for the ways people are traveling to the dispensary; and
- Provide a contribution (\$35,000) to the City toward transportation improvements the Applicant requests this contribution be paid within the first month of store opening.

CONCLUSIONS

The Project can be expected to have minimal impact on the surrounding roadways given the host of parking options and supply (demonstrated in tables of parking utilizations), and transit options. The two parking garages, First Street Municipal Garage and Cambridgeside Galleria Garage, in the immediate vicinity of the proposed establishment, during the projected weekday and weekend peak hours (4-6 PM and 11 AM - 2 PM respectively) of the dispensary's operation, appear under-utilized (see Table 6) and can support the proposed dispensary's customer parking. The parking lot walkway behind the Project building is wide enough to safely accommodate any unexpected customer overflow in a way that doesn't interfere with pedestrian foot traffic (see graphic A001.01 Volume 2).

In addition the above mentioned under-utilized garage parking, on-street metered parking may be available to customers should the registered parking spaces not be available, as demonstrated by the observed metered parking supply (15 spaces weekday peak hour and 16 spaces Saturday peak hour) during the hours of the proposed dispensary. It is worth noting that the adjacent building tenants businesses close for the day midway into the projected peak hours for the dispensary, so it can be expected that the on-street and registered parking supply will be significantly improved after 5:00 PM on the weekday.

With 155 projected vehicle trips during the weekday peak hours and 119 on the Saturday peak, that approximately calculates to 39 and 30 vehicle trips every 15 minutes respectively (assuming a customer/parking space turnover rate based on the maximum amount of time customers were observed in the studied dispensary). This equates to a projected 15-19 parking space demand every 15 minutes (4 spaces can be satisfied by

registered parking on-site) thus leaving an 11-15 parking space demand. That remaining parking demand by Sankofa customers can be met by metered parking (17 spaces suggested to be available on weekday peak and 7 spaces weekend peak according to study) or area lots at First Street and Cambridgeside Galleria Garage which have combined hundreds of available spaces during these hours.

The Applicant will work with the City to implement measures to reduce the number of customers that take private vehicles to the dispensary. The need for a Traffic Management Plan for the initial opening period should be finalized prior to opening and in consultation with City staff.

Details Plain text

Who is the project architect? Have you spoken with that person?

If there is not one currently, one will be required for submission of the building permit.

If the space is less that 3,000 ft2 then a vestibule is not required. The project architect will need to certify that.

Michael Grover Acting Senior Building Inspector Cambridge ISD

Subject: Vestibule requirement for 2,950 sqft retail space

Hello Michael Grover,

My name is Chauncy Spencer and I'm preparing for a special permit 95 First Street which is a new construction (2018). CDD wanted me to check to see if I needed a vestibule/airlock for the space. My reading is that the 2009 and 2012 IECC require that primary entrance doors accessing spaces 3,000 ft2 or greater have vestibules, but this is less than 3,000. Can you confirm? Thank you.
