Standpipe Tool Kits

The standpipe tool kit will aid the hose pack that is being brought inside the structure. The kit will provide complementary equipment that is sometimes needed to make the connection, advance the hose, communicate, or add other hoselines. The standpipe tool kit needs to be loaded with just the essential items that will be used on a semi-regular basis. Loading the kit with everything imaginable will only weigh the kit down, making it heavier and impractical to carry. Let's look at what items should be included in the kit, but not limited to.

- Door chocks & hose straps
- A gated wye
- A double male and a reducer
- A 45-degree elbow
- Hand tools (spanner and wrenches)
- A 2 ½ -inch gate valve with pressure gauge
