

# THE BEAUTY OF BATTERIES

Bye fossil fuels, hello batteries!

# More & more buildings have solar.

Solar energy benefits us all by reducing pollution while making clean electricity.

But the sun isn't always out, which is why **we need batteries to store the energy!**

# Batteries provide a storage solution!

Batteries can store energy from solar panels when the sun is shining and can supply energy when it's needed!

They can be used on normal days or during emergencies!

# They provide **RELIABLE** electricity...

... and help us be prepared for climate-related power outages.

# They replace noisy generators.

Back-up generators run on dirty fuels like diesel, which pollute our air and cause health issues in our community.

Batteries are silent, odorless, and don't pollute.

# They are flexible!

Most generators take time to power up, but batteries turn on and off **instantaneously** – meaning you might not even notice a power outage in your neighborhood!

# Turning off/on instantly...

Sometimes the utility or grid will pay to use your battery.

As they become more and more popular, batteries are also getting cheaper and cheaper!

**Batteries  
improve  
community  
preparedness &  
provide many  
other benefits!**
